ABOUT ME

Information Technology graduate from KMITL with hands-on experience designing and building full-stack web applications, from requirements through to deployment. Strong focus on system design, database architecture, API design, and code quality. Enjoys turning real user needs into reliable, maintainable software. Eager to grow as a professional Full-Stack Developer by learning from an experienced team.

EDUCATION

Bachelor of Science Program in Information Technology (Software Engineering) 2021 - 2025
King Mongkut's Institute of Technology Ladkrabang (KMITL) | GPAX: 3.11

- Transcript: https://bit.ly/3Uqd9Ht

SENIOR PROJECT

Web Application Platform to Support Image and Video Analysis with AI in a Microservice Model

Tech stack: TypeScript, React, TanStack Query, Material UI, Tailwind CSS, NestJS, TypeORM, PostgreSQL

- Co-developed a web platform that lets non-technical users run image and video analysis with AI models (classification, object detection, image regression, instance segmentation), deployed on the IT faculty's server and trialed by instructors, staff, and students at Siriraj Hospital.
- Built an admin panel where admins connect new AI microservices by API endpoint and configure how results are displayed, without changing application code.
- Designed the PostgreSQL schema with TypeORM and implemented shared workspaces with member invitations, access control, AI usage approval, and analysis history.
- Deployed the system with Docker and Nginx, using GitHub Actions to build and publish Docker images.

PROJECTS

Kanban Project Management Web App with Real-Time Task Board (2026) | turtask-management.vercel.app

Tech stack: TypeScript, Next.js, Zustand, Tailwind CSS, Go, PostgreSQL, WebSockets, GitHub Actions, Docker

- Built a team project management web app with Kanban boards, task assignment, and role-based access for owners, managers, and members.
- Implemented real-time collaboration using WebSockets, so task updates and drag-and-drop changes appear instantly for all team members viewing the same board.
- Built a CI/CD workflow where pull requests must pass GitHub Actions tests before merging, with automatic deployment to Vercel and Render.
- Wrote unit and integration tests for backend services, including tests against a real PostgreSQL database using Testcontainers.

Shop Inventory: Inventory & Order Back-Office (In Development) | turtle-shop.onrender.com

Tech stack: TypeScript, React, TanStack Query, Tailwind CSS, Go, Gin, PostgreSQL, LINE LIFF, Docker

- Built an inventory and order back-office for small shops, with customers ordering through LINE OA.
- Designed the system so stock is never oversold, even when orders arrive at the same time, with every stock change recorded in a history log and verified by automated tests.
- Covered the full stock lifecycle: receiving, in-store and LINE sales, packing and shipping, owner-approved stock counts, and a daily page of orders to pack and low-stock items.

SKILLS

- **Programming:** TypeScript, JavaScript, Go, Python, Java, SQL
- **Frontend:** Next.js, React, HTML/CSS, Tailwind CSS, Material UI, TanStack Query, Zustand
- **Backend:** Node.js (NestJS), Go (Gin, chi), Spring Boot, REST API, WebSockets
- **Database:** PostgreSQL, MySQL, MongoDB, Firebase, TypeORM
- **Tools:** Git, GitHub, GitHub Actions, Docker, Nginx, Vercel, Render, Postman, Figma, Claude Code
- **Practices:** Agile, Git Workflow (Pull Requests, Code Review), CI/CD, Unit & Integration Testing
- **Languages:** English (Intermediate), Thai (Native)
