ABOUT ME

Information Technology graduate from KMITL with hands-on experience building full-stack web applications, from initial requirements through to production deployment. Strong focus on system architecture, database design, and maintaining high code quality. Enjoys turning real user needs into reliable, maintainable software. Eager to grow as a professional Full-Stack Developer by learning from an experienced team.

EDUCATION

Bachelor of Science in Information Technology (Software Engineering) 2021 – 2025
King Mongkut's Institute of Technology Ladkrabang (KMITL)

- GPAX: 3.11 | Transcript: https://bit.ly/3Uqd9Ht

PROJECTS

Web Application Platform for AI Image and Video Analysis (Senior Project) 2025
Tech stack: TypeScript, React, TanStack Query, Tailwind CSS, NestJS, TypeORM, PostgreSQL, Docker, Nginx

- **Managed the end-to-end development lifecycle**, from requirement gathering and UI/UX design to system architecture, development, and production deployment.
- **Architected a microservices-based system**, converting assigned AI models (Classification, Object Detection, Segmentation, Regression) into Service APIs to run AI inference and visualize prediction results.
- **Developed role-based access control and shared workspaces** to facilitate team collaboration and manage authorization for AI service utilization.
- **Deployed the complete web application and AI microservices** onto the IT faculty's Linux VPS, managing server configurations and environment setups to ensure system readiness.

Kanban Project Management with Real-Time Task Board | Demo: turtask-management.vercel.app 2026
Tech stack: TypeScript, Next.js, Zustand, Tailwind CSS, Go, PostgreSQL, WebSockets, GitHub Actions, Docker

- **Developed a team project management web application** featuring Kanban boards, task assignment, and role-based access control.
- **Implemented real-time collaboration via WebSockets**, ensuring instant synchronization of task updates and drag-and-drop actions for all team members.
- **Added planning and personal views:** turn planning notes into board tasks, and a My Work page showing tasks due today or overdue across all boards.
- **Automated CI/CD pipelines** via GitHub Actions to run unit and integration tests before merging, with deployments to Vercel and Render.

Shop Inventory & Order Back-Office (In Development) | Demo: turtle-shop.onrender.com 2026
Tech stack: TypeScript, React, TanStack Query, Tailwind CSS, Go, PostgreSQL, LINE LIFF, Docker

- **Built an inventory and order management back office for small shops**, with customers able to order and receive status updates through LINE OA.
- **Covered the full stock workflow:** receiving, counter and LINE sales, packing, shipping, approved stock counts, and low-stock highlights.
- Prevented overselling during simultaneous orders, verified by concurrency tests.

TECHNICAL SKILLS

Programming:	TypeScript, Go, Python, Java, SQL
Frontend:	Next.js, React, Vue, Tailwind CSS, TanStack Query, Zustand
Backend:	Node.js (NestJS), Go (Gin, chi), Spring Boot, REST APIs, WebSockets
Database:	PostgreSQL, MySQL, MongoDB, Firebase
Cloud & Infrastructure:	AWS, GCP, Docker, Nginx, Linux VPS
DevOps & Tools:	Git, GitHub, GitHub Actions, CI/CD, Postman, Figma, Unit & Integration Testing
